

Foodstuffs Logistics

Niyac provides a full range of services for liquid, powdered etc. foodstuffs including the management of depots thereby allowing us the ability to adjust delivery service (e.g., redirecting loads, adjusting delivery times, etc.) to meet the needs of our customers. And we take the highest care to the "Food Defence" management.

Food Defence Management

Since the products the division transports are destined for human consumption, we take the utmost care to ensure the quality and integrity of the logistics process down to the smallest of details such as even the type of overalls our drivers wear. To this end, our drivers all carry with them, without exception, a manual that spells out in detail proper handling and quality maintenance procedures.
